

## **2020 mi-bike MOTORCYCLE INSURANCE AUSTRALIAN SUPERBIKE CHAMPIONSHIP** **OFFICIAL PRE-SEASON TEST : PHILLIP ISLAND** **TIMING BULLETIN**

### **Intermediate sector timing**

The sector timing and speed trap loops will be used for this testing sessions. This will result in the lap being split into 4 separate timing sectors with a speed trap near the end of the front straight. The split times and finish line speed will be shown on the Race Display screen, the Compulive internet-based timing application, and in printed reports. Refer to the map below for approximate locations:

### **Timing transponder collection and deposits**

Transponders will be available for collection from the timing room on the middle level of the control tower on Wednesday morning from 7:00am. As usual, a \$50 refundable security deposit is required, which can be left in cash or by recording credit card details. **If credit card details are left as the deposit, at your discretion they can then be retained and used for all other rounds of the championship – rather than filling in a new form each time. A form is attached for to you pre-fill your credit card details to save time when collecting your transponder(s).**

Competitors who do not have their own mounting bracket already can buy them when collecting transponders for **\$10 each** (GST incl). They can then retain the bracket on their bike for future events.

## **Timing transponder mounting and second bikes**

It is the competitor's responsibility to ensure that timing transponders are properly mounted for all testing sessions. Competitors found not to have transponders properly mounted, may be black-flagged from the session.

Competitors with two machines have the option of renting an additional timing transponder for a \$25 rental cost (\$15 if organized as part of the online entry). An additional transponder security deposit will also be required when collecting the transponder.

Alternatively, additional mounting brackets can be used to enable the transponder to be easily moved between bikes. If you choose to simply swap the transponder between bikes, and forget to do this, you WILL be black-flagged.

## **Television live timing**

Competitors bringing their own televisions can pick up timing information in garages by plugging in an aerial cable to the connection point in the garages. Aerial cables with the required "F" connector can be obtained from the pit office. Timing information will be available on HD digital channel 402 with track positioning on HD digital channel 403.

## **Computime website for live timing and results**

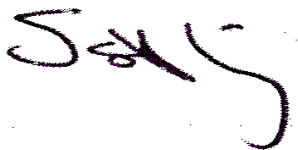

Computime's website will be available for competitors with internet enabled laptop computers, tablets, and smartphones. The intranet site features:

- All results from the meeting (only minutes after each session is completed) in HTML format (for viewing on your web browser) and PDF (Acrobat) format for you to save and print later.
- A live timing display application (for the session currently in progress).
- Additional reports available for download that are not normally photocopied for competitors (intermediate lap times, lap sheets, lap charts, fastest lap sequence and points updated after each race).

Follow the links from [www.computime.com.au](http://www.computime.com.au).

## **Local wireless intranet site**

Computime's local intranet site will also provide the above web-based live timing and results without the need for internet access. The signal will only be available in pit lane and possibly into the pit garages. To access the local intranet site, connect to the "COMPUTIME" wireless network and use [www.localtiming.com](http://www.localtiming.com) as the web address.
